Science teasers are fun, thought-provoking questions that encourage curiosity and exploration. They are often used in educational settings to stimulate interest and reinforce learning.

Categories of Science Puzzles and Their Answers

Science puzzles come in various formats, each requiring different approaches. Here, we categorize some common types and provide sample puzzles with detailed solutions.

1. Physics Puzzles and Twisters

- **Puzzle:** If you drop a ball from the top of a building, will it gain speed as it falls? Why or why not?

- **Answer:** Yes, the ball gains speed as it falls due to acceleration caused by gravity. According to physics, objects in free fall accelerate at approximately 9.8 m/s^2 near Earth's surface, increasing their velocity until terminal velocity or other forces (like air resistance) come into play.

- **Puzzle:** A train is moving at 60 mph north. If a bird flies south at 20 mph relative to the train, what is the bird's speed relative to the ground?

- **Answer:** The bird's speed relative to the ground is $60 \text{ mph} + 20 \text{ mph} = 80 \text{ mph}$ south. Since the bird flies south at 20 mph relative to the train, and the train moves north at 60 mph, the bird's net movement relative to the ground is 80 mph south.

2. Chemistry Puzzles and Twisters

- **Puzzle:** What element has the chemical symbol 'O' and is essential for respiration?

- **Answer:** Oxygen. Its chemical symbol is 'O', and it is crucial for cellular respiration in most living organisms.

- **Puzzle:** If you mix vinegar (acetic acid) with baking soda (sodium bicarbonate), what gas is produced?

- **Answer:** Carbon dioxide (CO_2) is produced during this chemical reaction, which is evidenced by bubbling or fizzing.

3. Biology Puzzles and Twisters

- **Puzzle:** Why do humans have more bones as babies than adults?

- **Answer:** Babies are born with around 270 bones, many of which fuse together during growth, resulting in approximately 206 bones in adults. This fusion provides flexibility during birth and growth but reduces the total number of bones over time.

- **Puzzle:** What part of the human body continues to grow even after death?

- **Answer:** The hair and nails can appear to continue growing due to the dehydration and shrinking of the skin after death, which creates the illusion of growth. However, actual growth does

not occur post-mortem.

4. Astronomy Puzzles and Twisters

- **Puzzle:** Why don't we feel the Earth spinning at 1,000 miles per hour?

- **Answer:** Because of Earth's constant rotational speed and the fact that everything ? including the atmosphere ? moves with it, we don't feel the motion. This is similar to how passengers don't feel movement when riding smoothly in a moving vehicle.

- **Puzzle:** If the Sun is at the center of our solar system, why do we see the Sun moving across the sky?

- **Answer:** Because Earth rotates on its axis, causing the Sun to appear to move across the sky from east to west during the day, despite the Sun remaining relatively stationary at the center of the solar system.

Popular Science Puzzles, Their Answers, and Explanations

Below are some classic science riddles, their solutions, and detailed explanations to deepen understanding.

1. The Water Bottle and the Ball

Puzzle:

You have a water bottle filled with water and a small ball. When you try to push the ball into the bottle, it doesn't go in. However, if you squeeze the bottle, the ball goes inside. Why?

Answer:

Because squeezing the bottle reduces the air pressure inside, creating a difference in pressure that pushes the ball into the bottle.

Explanation:

When the bottle is filled with water and a ball that fits tightly, inserting the ball might seem impossible due to air pressure and water displacement. Squeezing the bottle increases the internal pressure of air (and water slightly), which helps to force the ball inside as the pressure pushes against it. Alternatively, if the question involves a scenario where squeezing creates a vacuum or reduces the air pressure outside, the reverse can happen, illustrating concepts of pressure differentials. This puzzle highlights fluid dynamics and the importance of air pressure in everyday phenomena.

2. Why Do Objects Sink or Float?

Puzzle:

If you place a solid object in water, it either sinks or floats. What determines whether an object sinks or floats?

Answer:

An object floats if its average density is less than that of water; it sinks if its density is greater.

Explanation:

This is based on Archimedes' principle, which states that an object submerged in a fluid experiences an upward buoyant force equal to the weight of the displaced fluid. If the object's density (mass per unit volume) is less than water (about 1 g/cm³), it displaces enough water to support its weight and floats. Conversely, if the density exceeds that of water, it cannot be supported and sinks. This principle explains why ice floats (less dense than water), and why ships made of steel float?because their overall density is managed through design and hollow structures.

3. Why Does the Sky Appear Blue?

Puzzle:

Why is the sky blue during the day?

Answer:

Because of Rayleigh scattering, where shorter (blue) wavelengths of sunlight are scattered more efficiently by the Earth's atmosphere than other colors.

Explanation:

Sunlight is composed of various colors, each with different wavelengths. When sunlight enters Earth's atmosphere, molecules and tiny particles scatter the shorter wavelengths (blue and violet) more than longer wavelengths (red, yellow). Although violet light is scattered even more, our eyes are less sensitive to violet, and some of it is absorbed by the upper atmosphere. As a result, the sky appears blue to us. During sunrise or sunset, sunlight passes through a thicker layer of atmosphere, scattering away much of the blue and allowing longer wavelengths like red and orange to dominate, creating the beautiful hues of dawn and dusk.

4. What Keeps the Earth in Orbit?

Puzzle:

What force keeps the Earth orbiting around the Sun?

Answer:

Gravity.

Explanation:

Newton's law of universal gravitation states that every mass attracts every other mass with a force proportional to their masses and inversely proportional to the square of the distance between them. The Sun's gravity pulls Earth toward it, but Earth's tangential velocity prevents it from falling directly into the Sun, resulting in an orbit. This balance between inertia and gravitational pull maintains Earth's stable orbit. Understanding orbit mechanics involves concepts from physics, including centripetal force and gravitational acceleration.

5. The Mysterious Vanishing of the Water

Puzzle:

A glass of water is left outside overnight, and in the morning, it's empty. No one drank it, and no leaks are visible. What happened?

Answer:

The water evaporated due to the temperature change and exposure to the atmosphere.

Explanation:

Evaporation occurs when molecules gain enough energy to transition from the liquid to the gaseous state. Overnight, temperature drops and humidity conditions can cause water molecules to evaporate, especially if the glass is uncovered. In some cases, wind or dry air accelerates evaporation. This puzzle demonstrates phase changes, the water cycle, and the importance of environmental factors in physical processes.

Advanced Puzzles and Their Scientific Insights

Beyond simple riddles, more complex puzzles challenge understanding of advanced concepts.

6. The Twin Paradox

Puzzle:

In special relativity, one twin travels at near-light speed while the other stays on Earth. When the traveling twin returns, they find they have aged less. How is this possible?

Answer:

Because of time dilation, a phenomenon predicted by Einstein's theory of special relativity, moving clocks run slower relative to stationary observers.

Explanation:

Time dilation states that, from the perspective of a stationary observer, a clock moving at high velocity ticks slower. Conversely, from the moving twin's perspective, the stationary twin's clock appears to run slow during the journey. The traveling twin's frame of reference changes during acceleration and deceleration, making the scenario asymmetric. When they reunite, the traveling twin has experienced less elapsed time, illustrating the non-intuitive yet experimentally verified effects of high-speed motion on time.

7. The Double-Slit Experiment

Puzzle:

Particles like electrons display wave-like interference patterns when passing through a double slit, even when fired one at a time. How is this possible?

Answer:

Electrons exhibit wave-particle duality, where they behave as both particles and waves, leading to interference even when individual electrons are sent through the slits.

Explanation:

Quantum mechanics reveals that particles such as electrons have wavefunctions that can interfere. When electrons pass through the double slit, their wavefunctions overlap and interfere, creating a pattern characteristic of waves. Remarkably, this interference pattern emerges even when electrons are sent one at a time, implying each electron interferes with itself—a fundamental principle of quantum physics. This puzzle underscores the non-classical nature of the microscopic world and challenges our intuitive understanding of reality.

Conclusion

Question What is a common strategy to solve tricky science teasers involving riddles about the human body? A common strategy is to carefully analyze each clue, consider scientific facts related to anatomy and physiology, and think creatively about how different body parts or processes could fit the riddle's description. The Fascinating World of Atmospheric Science

Understanding the atmosphere involves delving into various layers, phenomena, and processes that govern weather patterns, climate systems, and even the behavior of particles and gases. The atmosphere is composed primarily of nitrogen (78%), oxygen (21%), and trace gases, with water vapor, aerosols, and pollutants constantly altering its composition.

Key components of atmospheric science include:

- Weather dynamics: How air masses move and interact.
- Climate patterns: Long-term trends and variations.
- Atmospheric chemistry: Reactions occurring among gases and particles.
- Physical phenomena: Lightning, tornadoes, auroras, and more.
- Human impact: Pollution, greenhouse gases, and climate change.

To better understand these complex systems, scientists have devised numerous puzzles and teasers ranging from riddles about weather phenomena to problem-solving scenarios about atmospheric processes.

Science Puzzlers: Engaging Minds with Atmospheric Mysteries

Science puzzlers are questions or problems that challenge our understanding of atmospheric science. They often appear as riddles, quizzes, or thought experiments designed to stimulate curiosity and critical thinking.

Examples of Atmospheric Science Puzzles

- The Greenhouse Effect Puzzle

Question: Why does the Earth's surface stay warmer than it would be without an atmosphere?

Explanation: The atmosphere traps heat through greenhouse gases, which absorb and re-emit infrared radiation. This natural greenhouse effect keeps our planet habitable. Think of it like a blanket that retains warmth.

- The Water Cycle Riddle

Question: What process turns water vapor into liquid water, and where does it occur?

Answer: Condensation occurs when water vapor cools and turns into liquid water, forming clouds.

- The Lightning Enigma

Question: How does a bolt of lightning form?

Explanation: When electrical charges build up in clouds due to turbulent air and collisions between particles, they create a voltage difference. When it exceeds a certain threshold, a discharge occurs as lightning.

Atmospheric Teasers for Learners of All Ages

- What causes the sky to appear blue during the day?

Answer: Rayleigh scattering of sunlight by nitrogen and oxygen molecules in the atmosphere.

- Why do we see colorful sunsets?

Answer: During sunset, sunlight passes through a thicker layer of atmosphere, scattering shorter blue and green wavelengths and allowing longer red and orange wavelengths to reach our eyes.

- How do hurricanes form?

Answer: Warm ocean water heats the air above it, causing it to rise and create low-pressure zones. As the system organizes, it can develop into a hurricane under the right conditions.

Twisters and Tornado Teasers: Unraveling Atmospheric Phenomena

Tornadoes are some of the most dramatic and destructive atmospheric events. Understanding how they form and behave is a key area of atmospheric science, and numerous puzzles and teasers help demystify these twisters.

How Do Tornadoes Form?

The formation of tornadoes involves complex interactions between different air masses, wind shear, and atmospheric instability. A typical scenario includes:

- A warm, moist air mass meets a cold, dry air mass.
- Wind shear causes the wind to change speed and direction with altitude.
- Updrafts in thunderstorms tilt the rotating air, creating a mesocyclone.
- If the rotation intensifies and reaches the ground, a tornado may form.

Tornado Formation Puzzle:

Question: What atmospheric conditions are necessary for a tornado to develop?

Answer: The key conditions include a rotating thunderstorm (supercell), sufficient wind shear, warm moist air at the surface, and atmospheric instability.

Teasers About Tornado Behavior

- Why do tornadoes often appear as a funnel shape?

Explanation: The funnel is the visible condensation of water droplets along the tornado's rotating column, which is stretched and shaped by low-pressure and wind dynamics.

- Can a tornado form without a thunderstorm?

Answer: Typically, tornadoes form within thunderstorms, but some rare tornadoes, called landspouts, can develop along lines of convergence without a supercell.

Teasing the Atmosphere: Brain Teasers and Thought Experiments

Atmospheric teasers often involve hypothetical scenarios or conceptual puzzles that challenge our

understanding of atmospheric processes.

Example 1: The Perfect Weather System

Puzzle: Imagine a planet with an atmosphere identical to Earth's but with no wind or weather patterns. How would this affect climate and life?

Thoughts: Without wind, weather systems and cloud movement would cease, leading to a static climate. Precipitation patterns would be significantly altered, impacting ecosystems and human activity.

Example 2: The Impact of Greenhouse Gases

Puzzle: If all greenhouse gases suddenly disappeared from the atmosphere, what would happen to global temperatures?

Answer: Temperatures would plummet, likely making Earth inhospitable. This illustrates the critical role greenhouse gases play in maintaining habitable conditions.

Challenge: The Atmospheric Puzzle Game

Create a list of atmospheric phenomena and challenge readers to match each with its cause, effect, or the scientific principle involved. For example:

- Lightning
- Aurora Borealis
- Thunderstorms
- Ozone Layer
- Droughts

Possible matches:

Atmospheric Science Puzzlers: A Closer Look

Core Concepts Underpinning These Puzzles

To understand atmospheric puzzles, one must grasp fundamental concepts such as:

- Pressure and Temperature Relationships
- Humidity and Dew Point
- Air Currents and Wind Patterns
- Cloud Formation and Types
- Weather Fronts and Storm Dynamics
- Atmospheric Composition and Radiation

Puzzles often exploit these principles to create scenarios that seem paradoxical or unexpected.

Examples of Popular Atmospheric Puzzles

Some classic and contemporary puzzles include:

- The 'Why Is the Sky Blue?' Riddle: Explores Rayleigh scattering and why the sky appears blue during the day but can turn red at sunset.
- The 'Falling Rain' Paradox: Why rain sometimes falls sideways or updrafts cause rain to defy gravity.
- The 'Mirage Mystery': Explains how distant objects appear displaced or distorted due to atmospheric refraction.
- Storm Formation Puzzles: Understanding how warm and cold air masses interact to produce thunderstorms.

Deep Dive into Specific Puzzles and Their Science

The Blue Sky Enigma

Question: Why is the sky blue during the day?

Answer: The phenomenon is primarily due to Rayleigh scattering, where shorter (blue) wavelengths of sunlight are scattered more effectively by molecules in the Earth's atmosphere than longer (red) wavelengths. When sunlight enters the atmosphere, the blue component is scattered in all directions, making the sky appear blue to an observer on the ground.

Twist/Teaser: Why does the sky turn red during sunset?

Explanation: At sunset, sunlight passes through a thicker layer of atmosphere. The shorter blue and green wavelengths are scattered out of the line of sight, leaving the longer red and orange wavelengths to reach the observer, creating the vivid hues of dawn and dusk.

The Mirage Puzzle

Scenario: Why do distant objects like ships or roads sometimes appear displaced or distorted on hot days?

Underlying Science: This is caused by refraction—the bending of light as it passes through layers of air with varying temperatures and densities. Warm air near the ground causes light rays to bend upward, creating the illusion that objects are displaced or appear to float.

Teaser: Can the same effect happen over cold water?

Answer: Yes. When cold air overlays warmer water or land, a different type of mirage called inferior or superior mirage can occur, producing illusions like “floating” objects or inverted images.

Storm Formation and Twisters

Question: How do atmospheric conditions produce tornadoes?

Science behind it: Tornadoes form when a combination of warm, moist air from the Gulf of Mexico collides with cold, dry air from Canada or the Rockies under the influence of wind shear—changes in wind speed and direction with altitude.

Puzzle Twist: Why do some thunderstorms produce tornadoes while others don't?

Explanation: Not all thunderstorms develop the necessary rotation and vertical wind shear to spawn tornadoes. Factors like atmospheric instability, humidity levels, and the presence of a supercell (a rotating thunderstorm) are crucial.

Sample Puzzles from the 2019 Edition

Example 1: Logic Puzzle

You have three boxes. One contains only apples, another only oranges, and the third contains both apples and oranges. All boxes are labeled incorrectly. You may pick only one fruit from one box. How can you correctly label all the boxes?

Solution:

Pick a fruit from the box labeled "Mixed" (which is incorrectly labeled). If you pick an apple, that box contains only apples. The remaining labels can then be corrected accordingly.

Example 2: Math Puzzle

What is the next number in the sequence: 2, 6, 12, 20, 30, ?

Solution:

The pattern adds an increasing even number each time: +4, +6, +8, +10. The next addition should be +12, so the next number is $30 + 12 = 42$.

Example 3: Word Puzzle

Rearrange the letters in "LISTEN" to form another word that means "to hear."

Answer:

"Silent" (though it has a different meaning, the puzzle may be a trick; alternatively, the puzzle may be to find an anagram that relates to hearing).

Each page presents the puzzle prominently, often accompanied by visual aids or illustrations to enhance understanding. The use of bold fonts and clear formatting ensures readability, even in low-light conditions.

Included Solutions and Explanations

A notable feature of the 2019 edition is the inclusion of solutions and explanations, typically on the reverse side or in a designated section. Enhancing Problem-Solving Skills

Regular engagement with daily puzzles challenges the brain to develop and refine problem-solving strategies. Over time, users often notice improvements in their ability to approach complex problems systematically, analyze patterns more efficiently, and apply logic more effectively.

Boosting Memory and Concentration

Many puzzles require holding multiple pieces of information in mind simultaneously, fostering working memory. The daily routine also encourages sustained concentration, which can translate into benefits in academic, professional, and personal contexts.

Encouraging Critical Thinking and Creativity

Lateral thinking puzzles, in particular, stimulate creative approaches to problem-solving, teaching users to think outside conventional parameters and consider alternative solutions.

Difficulty Disparity

Though the balance is generally well-maintained, some users may find certain puzzles either too easy or excessively challenging, depending on their skill level. Advanced solvers might seek more complex puzzles, while beginners may occasionally feel overwhelmed.

Limited Space for Notes

The compact size of the calendar, while convenient, offers limited space for detailed notes or scratch work, which can be a drawback for those who like to work out puzzles extensively.

Understanding Math Puzzles, Twisters, and Teasers

Before diving into specific puzzles and their solutions, it's essential to understand what constitutes math puzzles, twisters, and teasers.

What Are Math Puzzles?

Math puzzles are problems that require logical reasoning, numerical skills, and creative thinking to solve. They often involve patterns, sequences, or mathematical concepts that challenge conventional thinking.

What Are Math Twisters?

Math twisters are tricky puzzles designed to mislead or confuse the solver, often involving wordplay, unusual problem setups, or misleading information. They test your ability to think outside the box.

What Are Math Teasers?

Teasers are short riddles or questions that require cleverness and insight to solve. Math teasers often have surprising or humorous answers that make you think differently.

Popular Types of Math Puzzles and Their Solutions

Here's a categorized overview of popular math puzzles, along with their solutions to help you learn and enjoy solving them.

1. Number Riddles

Number riddles are puzzles involving sequences, sums, or specific properties of numbers.

- **Example:** What is the next number in the sequence: 2, 4, 8, 16, ?
- **Answer:** 32. The sequence doubles each time.

2. Arithmetic Puzzles

These puzzles involve basic operations like addition, subtraction, multiplication, or division.

- **Example:** Using the numbers 1, 3, 4, and 6, make 24 using basic operations.
- **Answer:** $(6 / (1 - 3/4)) = 24$.

3. Logic and Pattern Puzzles

These puzzles require identifying patterns or logical reasoning.

- **Example:** If five cats catch five mice in five minutes, how long does it take one cat to catch one mouse?
- **Answer:** Five minutes. Each cat catches one mouse in five minutes, independently.

4. Word and Letter Puzzles

These puzzles involve wordplay, letter arrangements, or linguistic tricks.

- **Example:** What 4-letter word can be written forward, backward, or upside down, and still be the same?
- **Answer:** NOON.

Top Math Twisters and Their Solutions

Math twisters are often designed to mislead or challenge assumptions. Here are some classic examples with explanations.

1. The Classic "Counterintuitive" Puzzle

Puzzle: A bat and a ball cost \$1.10 in total. The bat costs \$1.00 more than the ball. How much does the ball cost?

Solution:

Initially, one might think the ball costs \$0.10, but that would make the bat cost \$1.10, totaling \$1.20, which is more than \$1.10.

Let's denote the ball's cost as x . Then, the bat's cost is $x + \$1.00$.

Equation: $x + (x + \$1.00) = \1.10

$2x + \$1.00 = \1.10

$2x = \$0.10$

$x = \$0.05$

Answer: The ball costs \$0.05, and the bat costs \$1.05.

2. The "He Can, She Can" Puzzle

Puzzle: A man and a woman are running a race. The man is twice as fast as the woman. They start running at the same time from opposite ends of a 100-meter track. When they meet, who is closer to the starting point of the man?

Solution:

Since they start at opposite ends and run towards each other, when they meet, they are equidistant from their respective starting points.

Answer: Neither?both are equally close to their respective starting points at the moment they meet.

3. The "Age Puzzle"

Puzzle: A father is three times as old as his son. In 5 years, he will be twice as old as his son. How old are they now?

Solution:

Let the son's current age be x . Then, father's age is $3x$.

In 5 years:

Father's age: $3x + 5$

Son's age: $x + 5$

Equation: $3x + 5 = 2(x + 5)$

$3x + 5 = 2x + 10$

$3x - 2x = 10 - 5$

$x = 5$

Answer: Son is 5 years old, father is 15 years old.

Four friends?Alice, Bob, Carol, and Dave?are sitting in a row. Alice is to the left of Bob, and Dave is to the right of Carol. Who is sitting in the middle?

Answer: Bob or Carol (depending on the arrangement), but more details are needed for certainty.

Algebraic and Geometric Puzzles

These puzzles involve formulas, equations, or geometric concepts to find solutions. They often require setting up equations or visual reasoning.

Features:

A rectangle has a length that is twice its width. If the perimeter is 48 units, what are its dimensions?

Answer: Width = 6 units, Length = 12 units

Popular Math Puzzles and Their Solutions

Below are some classic puzzles along with detailed explanations and answers to illustrate problem-solving techniques.

The Missing Dollar Puzzle

Puzzle:

Three friends check into a hotel room that costs \$30. They each pay \$10. Later, the hotel realizes the room rate was only \$25 and gives \$5 back to the bellboy to return to the friends. The bellboy, unable to split \$5 evenly among three people, gives each friend \$1 back and keeps \$2. Now, each friend has paid \$9, totaling \$27, and the bellboy has \$2, totaling \$29. Where is the missing dollar?

Answer & Explanation:

The confusion arises from adding \$27 and \$2, which is incorrect because the \$2 is part of the \$27 paid, not in addition to it. The actual breakdown:

- Total paid by friends: $\$9 \text{ each} \times 3 = \27
- Out of this, \$25 goes to the hotel, and \$2 is kept by the bellboy.
- The remaining \$3 is returned to the friends (\$1 each).

The correct accounting:

$\$25 \text{ (hotel)} + \$2 \text{ (bellboy)} + \$3 \text{ (returned)} = \30 total paid.

Key Point: The puzzle tricks you into adding the bellboy's \$2 to the \$27, which is misleading. The actual total is the \$25 plus the \$3 returned (which sums to \$28), with the remaining \$2 with the bellboy, totaling \$30.

The Crossed-Wires Puzzle

Puzzle:

You have two wires, each 100 meters long. One wire costs \$1 per meter, and the other costs \$4 per meter. How can you make a 50-meter wire that costs exactly \$2?

Answer & Explanation:

Cut 50 meters from the \$4 per meter wire and 0 meters from the \$1 per meter wire. The total cost for the 50-meter wire is:

$$- 50 \text{ meters from the } \$4/\text{m wire} = 50 \times \$4 = \$200$$

This exceeds the budget, so this approach doesn't work directly.

Alternatively, consider connecting parts of both wires in series or parallel to create a 50-meter wire that costs exactly \$2 per meter.

Solution:

Use 25 meters of the \$4/m wire and 25 meters of the \$1/m wire:

- Cost of 25 meters of \$4/m wire = $25 \times \$4 = \100
- Cost of 25 meters of \$1/m wire = $25 \times \$1 = \25
- Total length = 50 meters
- Total cost = \$125

Cost per meter = $\$125 / 50 = \2.50 , which is more than \$2.

To get exactly \$2 for 50 meters, you need a mixture where the average cost per meter is \$2:

Let x be the length from the \$4/m wire, and $(50 - x)$ from the \$1/m wire:

$$(4x + 1(50 - x)) / 50 = 2$$

Solve for x :

$$(4x + 50 - x) / 50 = 2$$

$$(3x + 50) / 50 = 2$$

$$3x + 50 = 100$$

$$3x = 50$$

$$x = 16.66 \text{ meters (approx)}$$

$$\text{Cost of the \$4/m wire part: } 16.66 \times \$4 = \$66.67$$

$$\text{Cost of the \$1/m wire part: } (50 - 16.66) \times \$1 = \$33.33$$

$$\text{Total cost} = \$100$$

Total cost for 50 meters:

$$(16.66 + 33.33) = 50 \text{ meters, costing approximately \$100, which yields an average of \$2 per meter.}$$

Conclusion:

By mixing approximately 16.66 meters of the \$4/m wire with 33.33 meters of the \$1/m wire, you can create a 50-meter wire costing exactly \$100, i.e., \$2 per meter.
