- Review related concepts: For example, if uncertain about a material, revisit its properties and indications.

Sample Questions and Their Detailed Analysis

To illustrate the depth and scope, here are sample MCQs with thorough explanations:

Q1: Which of the following materials is most suitable for restoring a Class V cavity on a cervical lesion?

- a) Amalgam
- b) Resin-modified glass ionomer cement
- c) Gold foil
- d) Porcelain veneer

Analysis:

The correct answer is b) Resin-modified glass ionomer cement. This material is favored for Class V lesions because of its chemical adhesion to enamel and dentin, fluoride release, and good handling properties. Amalgam is less desirable due to aesthetic concerns and less adhesion, while gold foil and porcelain veneers are not used for such small cervical lesions.

Q2: In endodontic treatment, which irrigant is most effective in removing the smear layer?

- a) Sodium hypochlorite (NaOCl)
- b) Ethylenediaminetetraacetic acid (EDTA)
- c) Chlorhexidine
- d) Hydrogen peroxide

Analysis:

The correct answer is b) EDTA. EDTA is used to chelate calcium ions, effectively removing the inorganic component of the smear layer. NaOCl is excellent for tissue dissolution and disinfection but less effective in smear layer removal alone.

Q3: During cavity preparation, the bur should be held at which angle to the tooth surface for optimal retention?

- a) Perpendicular (90°)
- b) 45°
- c) 15° to 20°
- d) Parallel (0°)

Analysis:

The correct answer is c) 15° to 20°. Slight angulation helps in creating retention grooves and undercuts for mechanical retention of the restorative material.
