Sample NCCCO Crane Test Questions and Explanations

To illustrate the nature of NCCCO test questions, here are some representative examples with detailed explanations.

Sample Question 1: Load Chart Interpretation

Question:

A 50-ton mobile crane is set up with outriggers fully extended and on firm ground. According to the load chart, what is the maximum safe lifting capacity at a radius of 30 feet?

A) 25 tons

B) 40 tons

C) 50 tons

D) 35 tons

Answer:

D) 35 tons

Explanation:

Load charts specify lifting capacities based on boom length, radius, and setup conditions. A fully extended outriggers on firm ground increases stability, but the maximum capacity at a 30-foot radius must be checked on the specific load chart. Typically, at a 30-foot radius, the capacity is less than the maximum crane capacity due to leverage. The correct answer reflects the load chart's specified capacity under the given setup conditions.

Sample Question 2: Rigging Safety

Question:

Before lifting a load, the operator notices that the rigging slings are frayed and have broken fibers. What should be the immediate action?

A) Continue lifting, monitoring the slings closely

B) Replace or repair the slings before proceeding

C) Use additional slings to distribute the load

D) Use the slings as they are, since the damage is minor

Answer:

B) Replace or repair the slings before proceeding

Explanation:

Damaged rigging slings compromise load safety and can lead to accidents. OSHA and industry standards mandate that rigging equipment in poor condition must be repaired or replaced before

lifting. Ignoring damage risks load failure and potential injury.

Sample Question 3: Signal and Communication

Question:

During crane operation, the signal person is giving hand signals from a distance. The operator cannot see the signal clearly due to obstructions. What is the best course of action?

- A) Continue operating based on the last clear signal
- B) Stop the lift and clarify signals with the signal person
- C) Use radio communication to confirm signals
- D) Proceed with caution without further communication

Answer:

- C) Use radio communication to confirm signals

Explanation:

Clear communication is essential for safe crane operations. When visual signals are obstructed, switching to radio communication ensures that instructions are understood accurately, preventing accidents.
