In-Depth Explanation of Core Topics

Understanding Ecosystems and Habitats

Ecosystems are dynamic systems where biotic components (living things) and abiotic components (non-living things) interact. The health of an ecosystem depends on biodiversity and the balance of these interactions.

- **Biotic factors:** Plants, animals, fungi, bacteria.
- **Abiotic factors:** Climate, soil, water, sunlight.

Different habitats support specific organisms adapted to their environments. For example, cacti are adapted to desert habitats with scarce water, while fish thrive in aquatic environments.
