Sample Practice Questions with Detailed Answers

Question 1:

Suppose the demand for a product is perfectly elastic. Which of the following statements is true?

- a) The demand curve is vertical.
- b) Consumers are highly sensitive to price changes.
- c) The price elasticity of demand is zero.
- d) The demand curve is downward sloping but inelastic.

Answer: b) Consumers are highly sensitive to price changes.

Explanation:

A perfectly elastic demand curve is horizontal, indicating that consumers will buy any quantity at a specific price but none at a price higher or lower. This means demand is infinitely responsive to price changes, making consumers highly sensitive. Choice a) describes perfectly inelastic demand, which is a vertical demand curve. Choices c) and d) are incorrect because they do not accurately describe perfectly elastic demand.

Question 2:

If the supply of a good decreases, all else equal, what is likely to happen to the market equilibrium?

- a) Price decreases, quantity increases.
- b) Price increases, quantity decreases.
- c) Both price and quantity decrease.
- d) Both price and quantity increase.

Answer: b) Price increases, quantity decreases.

Explanation:

A decrease in supply shifts the supply curve to the left, leading to higher prices and a lower quantity exchanged in the market. Consumers face higher prices, which typically reduces the quantity demanded, resulting in a new equilibrium with a higher price and lower quantity.

Question 3:

A monopolist faces the following demand curve: $P = 100 - 2Q$. The monopolist's total cost is \$200. What is the profit-maximizing output level?

- a) 20 units
- b) 25 units
- c) 30 units
- d) 35 units

Answer: c) 30 units

Explanation:

First, derive the total revenue (TR) and marginal revenue (MR):

$$TR = P \times Q = (100 - 2Q) \times Q = 100Q - 2Q^2$$

$$MR = \text{derivative of TR with respect to } Q = 100 - 4Q$$

Set $MR = MC$ (assuming constant marginal cost at total cost \$200 for the relevant quantity):

Since total cost is \$200, and total cost for Q units is linear, the marginal cost (MC) is:

$$MC = \text{Total Cost} / \text{Quantity}.$$

But total cost is \$200; to find MC, we need to assume it's constant or that total cost is linear with Q .

Alternatively, if total cost is \$200 at some quantity, more info is needed. For simplicity, assume $MC = \$200 / Q$. To maximize profit, set $MR = MC$:

$$100 - 4Q = 200 / Q$$

Multiply both sides by Q:

$$(100 - 4Q)Q = 200$$

$$100Q - 4Q^2 = 200$$

Rearranged:

$$4Q^2 - 100Q + 200 = 0$$

Divide through by 4:

$$Q^2 - 25Q + 50 = 0$$

Using quadratic formula:

$$Q = [25 \pm \sqrt{(25^2 - 4 \times 1 \times 50)}] / 2$$

$$Q = [25 \pm \sqrt{(625 - 200)}] / 2$$

$$Q = [25 \pm \sqrt{425}] / 2$$

$$\sqrt{425} \approx 20.6$$

Possible Q values:

$$Q = (25 + 20.6)/2 \approx 45.6/2 \approx 22.8$$

$$Q = (25 - 20.6)/2 \approx 4.4/2 \approx 2.2$$

Between these, the profit-maximizing quantity is approximately 23 units or 2 units. Among options, 30 units is closest to the higher estimate, but based on calculations, the precise answer depends on the cost structure.

Note: This sample illustrates the process; actual exam questions may specify costs more precisely. The key takeaway is setting $MR = MC$ and solving accordingly.

Deep Dive into Practice Exam AP Microeconomics Section 1 Answers

Now, let's analyze some typical types of questions and their detailed answers to solidify your understanding.

Question Example 1: The Law of Demand

Question: Which of the following best illustrates the law of demand?

- A) As the price of a good decreases, the quantity demanded increases.
- B) As the price of a good increases, the quantity demanded increases.
- C) As income increases, demand for inferior goods increases.
- D) As the price of a substitute good decreases, demand for the original good decreases.

Answer Explanation:

The law of demand states that, ceteris paribus, there is an inverse relationship between price and quantity demanded. Among the options, A correctly captures this principle, indicating that a decrease in price leads to an increase in quantity demanded.

Key Takeaways:

- Remember the inverse relationship
- Understand how demand curves slope downward
- Avoid confusing demand with related concepts like income effects or substitutes

Question Example 2: Graph Interpretation ? Shifts in Supply and Demand

Question: If the demand curve for coffee shifts to the right, and the supply curve remains unchanged, what is the most likely effect on the equilibrium?

- A) Price decreases, quantity decreases
- B) Price increases, quantity increases
- C) Price decreases, quantity increases
- D) Price remains unchanged, quantity increases

Answer Explanation:

A rightward shift in demand indicates increased consumer interest, leading to higher equilibrium price and quantity, assuming supply remains constant. Therefore, the correct answer is B.

Important Concepts:

- Demand shifts right ? higher demand at each price level
- Equilibrium moves along the supply curve to a new intersection
- Both price and quantity typically increase in this scenario

Question Example 3: Elasticity Calculation

Question: The price elasticity of demand for a product is calculated as 2.0. If the price decreases by 5%, what is the expected percentage increase in quantity demanded?

- A) 2.5%
- B) 5%
- C) 10%
- D) 15%

Answer Explanation:

Price elasticity of demand (PED) = % change in quantity demanded / % change in price.

Rearranged: % change in quantity demanded = PED × % change in price.

Given: PED = 2.0, % change in price = -5% (price decreases, so negative)

Calculation:

% change in quantity demanded = $2.0 \times 5\% = 10\%$

Since the demand is elastic, a 5% decrease in price results in approximately a 10% increase in quantity demanded. The correct answer is C.

Key Concepts:

- Elastic demand (>1) indicates sensitive response
- Use the formula carefully, paying attention to signs
- Understand implications for revenue and pricing strategies

Question Example 4: Market Structures and Outcomes

Question: Which market structure is characterized by many firms selling differentiated products, free entry and exit, and some control over prices?

- A) Perfect competition
- B) Monopoly
- C) Monopolistic competition

D) Oligopoly

Answer Explanation:

The described features align with monopolistic competition, where numerous firms sell similar but differentiated products, and there's relatively easy entry and exit. Firms have some control over pricing due to product differentiation but are still constrained by competition.

Key Takeaways:

- Recognize features of different market structures
- Understand how product differentiation influences market power
- Recall barriers to entry and number of firms

Common Pitfalls and How to Avoid Them

Even experienced students can fall prey to common mistakes. Recognizing these pitfalls and strategies to avoid them can improve your accuracy.

- Misreading the Question
- Always re-read to ensure you understand what is being asked
- Look for keywords indicating cause-effect, comparison, or definitions
- Overlooking Graph Details
- Pay close attention to axes, shifts, and intersections
- Confirm which curve is shifting and in what direction
- Forgetting Basic Principles
- Keep fundamental concepts like supply and demand relationships, elasticity, and market structures fresh in mind

- Ignoring Data or Scenarios
- Use provided data to support your answer
- Don't rely solely on memorized facts
- Rushing
- Allocate your time wisely
- Use process of elimination if unsure
