Sample Questions and Detailed Answers from 2014 WAEC Economics Paper

Section A: Multiple Choice Questions (MCQs)

These questions tested factual knowledge and understanding of basic economic concepts.

- **Question:** Which of the following best defines the concept of scarcity in economics?
- A) The unlimited wants of humans

- B) The limited availability of resources to satisfy unlimited wants
- C) The excess of supply over demand
- D) The process of economic growth

- **Answer:** B) The limited availability of resources to satisfy unlimited wants

- **Question:** In a free market, the price of a commodity is determined mainly by:

- A) Government regulation
- B) The interaction of demand and supply
- C) Producer's selling price
- D) Consumer income levels

- **Answer:** B) The interaction of demand and supply

Section B: Structured Questions and Solutions

This section requires detailed responses and application of economic theories.

Question 1: Explain the concept of price elasticity of demand and discuss its significance in business decision-making.

Answer:

Price elasticity of demand measures how much the quantity demanded of a good responds to a change in its price. It is calculated as the percentage change in quantity demanded divided by the percentage change in price:

\[

$$\text{Price Elasticity of Demand (PED)} = \frac{\% \text{ change in quantity demanded}}{\% \text{ change in price}}$$

\]

Depending on the value of PED, demand can be classified as:

- **Elastic (>1):** Demand is sensitive to price changes. A small price change causes a significant change in quantity demanded.

- Inelastic (Demand is less sensitive to price changes. Quantity demanded changes little with price fluctuations.
- Unit elastic (=1): Percentage change in demand equals the percentage change in price.

Significance in Business Decision-Making:

Understanding price elasticity helps businesses optimize pricing strategies. For products with elastic demand, lowering prices can increase total revenue, while for inelastic goods, raising prices might be beneficial without significantly reducing sales. It also influences decisions on advertising, production levels, and market entry strategies.

Question 2: Discuss the different types of market structures and highlight their characteristics.

Answer:

Market structures refer to the organization and characteristics of a market, primarily determined by the number of firms, the nature of products, and entry barriers. The main types include:

- Perfect Competition:
 - Large number of small firms
 - Homogeneous products
 - Free entry and exit
 - Price takers
 - Perfect knowledge among buyers and sellers
- Monopoly:
 - Single seller controls the entire market
 - Unique product with no close substitutes
 - High barriers to entry
 - Price maker
- Monopolistic Competition:
 - Many firms selling differentiated products
 - Relatively free entry and exit
 - Firms have some control over prices

- Oligopoly:

- Few large firms dominate the market
- Products may be homogeneous or differentiated
- High barriers to entry
- Interdependence among firms affects pricing and output decisions

Analyzing Data and Graphs from the 2014 WAEC Economics Exam

Data interpretation questions were common in 2014, requiring candidates to analyze graphs and tables.

Sample Data Interpretation Question

Question:

The table below shows the demand for a commodity at different prices:

| Price (Naira) | Quantity Demanded (units) |

|-----|-----|

| 50 | 200 |

| 40 | 300 |

| 30 | 400 |

| 20 | 500 |

| 10 | 600 |

Calculate the price elasticity of demand between the prices of 50 and 40 Naira.

Solution:

- Determine the change in quantity demanded:

√

$$\Delta Q = 300 - 200 = 100$$

]

- Determine the change in price:

[

$$\Delta P = 40 - 50 = -10$$

]

- Calculate the average quantity and average price:

[

$$Q_{\text{avg}} = \frac{200 + 300}{2} = 250$$

]

[

$$P_{\text{avg}} = \frac{50 + 40}{2} = 45$$

]

- Calculate the percentage changes:

[

$$\% \text{ Change in } Q = \frac{100}{250} \times 100 = 40\%$$

]

[

$$\% \text{ Change in } P = \frac{-10}{45} \times 100 \approx -22.22\%$$

\]

- Calculate PED:

\[

$$PED = \frac{40}{-22.22} \approx -1.8$$

\]

Interpretation:

The demand between these two prices is elastic ($PED > 1$ in absolute value), indicating that a 1% decrease in price results in approximately a 1.8% increase in quantity demanded.

Sample 2014 WAEC Economics Questions and Model Answers

Providing specific questions alongside model answers can help students understand the expected approach and depth of knowledge.

Question 1: Define and explain the law of demand. Illustrate your answer with a diagram.

Sample Answer:

The law of demand states that, *ceteris paribus*, as the price of a good or service increases, the quantity demanded decreases, and vice versa. This inverse relationship is due to the substitution effect and income effect, where consumers tend to buy less of a good when its price rises because it becomes relatively more expensive, and vice versa.

Diagram:

(Include a downward-sloping demand curve labeled D)

Explanation:

The demand curve slopes downward from left to right, indicating that at higher prices, consumers are willing to buy less, and at lower prices, they buy more.

Question 2: Discuss the causes of inflation and its effects on an economy.

Sample Answer:

Causes of Inflation:

- Excessive demand (Demand-pull inflation): When aggregate demand exceeds aggregate supply.
- Cost-push factors: Rising production costs, such as wages and raw materials, lead to increased prices.
- Monetary expansion: An increase in the money supply without a corresponding increase

in goods and services.

- Imported inflation: Rising prices of imported goods due to exchange rate depreciation.

Effects of Inflation:

- Reduced purchasing power: Consumers can buy less with the same amount of money.
- Uncertainty: Business planning becomes difficult, discouraging investment.
- Income redistribution: Fixed income earners suffer, while debtors may benefit.
- Wage-price spiral: Rising wages lead to higher prices, fueling further inflation.

Common Fishery Questions from WAEC 2014 and Their Answers

Below are some of the most frequently encountered questions from the 2014 WAEC Fishery exam, along with detailed answers to aid your studies.

1. Define Fisheries and Explain Its Importance

Question:

Define fisheries and discuss its importance to the economy.

Answer:

Fisheries refer to the industry or activity of catching, processing, and selling fish and other aquatic organisms. It encompasses both wild capture fisheries and aquaculture (fish farming). Fisheries are crucial to the economy because they provide food security, employment, and income for millions of people. They contribute to foreign exchange earnings through exports and support related industries such as processing, packaging, and transportation.

Key Points:

- Fisheries include all activities related to catching aquatic animals.
- They supply protein-rich food to populations.
- They generate employment in fishing, processing, and marketing sectors.
- They contribute significantly to national income and foreign exchange.

2. List and Describe Different Types of Fishing Gear

Question:

Identify and explain three types of fishing gear used in fisheries.

Answer:

The main types of fishing gear include:

- **Gill Nets:** These are vertical panels of netting with mesh sizes designed to catch fish by their gills. Fish swim into the net and get entangled by their gills, making it easy to capture

them.

- **Traps:** These are devices or cages used to trap fish. They are often baited and allow fish to enter but prevent their escape.
- **Long Lines:** This gear consists of a main line with numerous baited hooks spaced at intervals. It is used to catch large pelagic fish like tuna and billfish.

Additional Notes:

- Each gear type is chosen based on target species and fishing environment.
- Proper selection and handling of gear are essential for sustainable fishing.

3. Explain the Concept of Fish Stock Conservation

Question:

What is fish stock conservation, and why is it important?

Answer:

Fish stock conservation involves managing fish populations to prevent overfishing, ensure sustainable yields, and maintain ecological balance. It includes measures such as setting catch limits, establishing closed seasons, and protecting breeding habitats.

Importance:

- Prevents depletion of fish populations.
- Ensures continuous availability of fish for future generations.
- Maintains biodiversity within aquatic ecosystems.
- Supports the livelihoods of fishing communities.

4. Describe Methods of Fish Preservation

Question:

Outline three methods used in preserving fish after harvest.

Answer:

Three common fish preservation methods include:

- **Salting and Drying:** Fish are heavily salted to draw out moisture and then sun-dried or smoked. This process inhibits bacterial growth.
- **Freezing:** Fish are kept at low temperatures using refrigerators or ice packs, slowing down microbial activity.
- **Canning:** Fish are cooked, packed in sterilized containers, and heat-treated to kill bacteria, allowing long-term storage.

Additional Tips:

- Proper preservation extends shelf life and maintains nutritional value.
- Combining methods (e.g., freezing and smoking) can improve preservation quality.

Additional Key Topics Covered in WAEC Fishery 2014

Beyond the core questions, the 2014 WAEC exam also tested students on various other topics vital to fisheries science.
