Definition and Composition

Bath bombs are small, compacted mixtures of dry ingredients designed to fizz and dissolve when submerged in water. Their core components typically include baking soda (sodium bicarbonate), citric acid, Epsom salts, and various aromatic and colorants. When placed in water, the baking soda and citric acid react to produce carbon dioxide gas, creating the characteristic fizzing effect. This reaction not only provides visual entertainment but also helps disperse scents, colors, and skin-nourishing ingredients into the bathwater.

The Science Behind the Fizz

The effervescent sensation of a bath bomb results from an acid-base chemical reaction. Baking soda (a base) and citric acid (an acid) combine when water is introduced:
