Sample Questions and Answers from 2013 EOCT

Below are examples of typical questions from the 2013 EOCT, illustrating the type of content and

the expected responses.

Question 1: Supply and Demand

Suppose the price of a popular smartphone decreases. What is the most likely effect on the quantity demanded and the quantity supplied?

Sample Correct Answer:

A decrease in price typically leads to an increase in the quantity demanded because consumers are more willing to buy the product at a lower price. Conversely, the quantity supplied may decrease or stay the same, but in many cases, suppliers may be willing to produce less at the lower price. Overall, the decrease in price causes movement along the demand and supply curves, resulting in a higher quantity demanded and a lower quantity supplied, leading toward a new equilibrium.

Question 2: Fiscal Policy

If the government increases its spending during a period of recession, what is the expected impact on aggregate demand?

Sample Correct Answer:

Increasing government spending during a recession is likely to increase aggregate demand because government expenditure is a component of aggregate demand. This increase can help stimulate economic activity, reduce unemployment, and promote economic growth.

Question 3: Personal Finance

What is the advantage of compound interest over simple interest?

Sample Correct Answer:

Compound interest earns interest on both the initial principal and accumulated interest from previous periods, leading to faster growth of savings over time. In contrast, simple interest is calculated only on the original principal, resulting in slower growth.
